Mission Systems

ADOPTION OF PYRAMID FOR ADAPTABILITY

General Dynamics Mission Systems–United Kingdom provides mission critical solutions to those who lead, serve, and protect the world we live in. With over 40 years of experience in engineering advanced weapons integration systems, our expertise has contributed to the emergence of UK process standards.

PYRAMID was developed to deliver operational advantage through the adoption of an open system architecture approach enabling rapid adaptability and systematic software reuse.

PYRAMID is key to ensuring both legacy and future air mission systems are affordable, capable, and adaptable to support enhanced MOD capability.

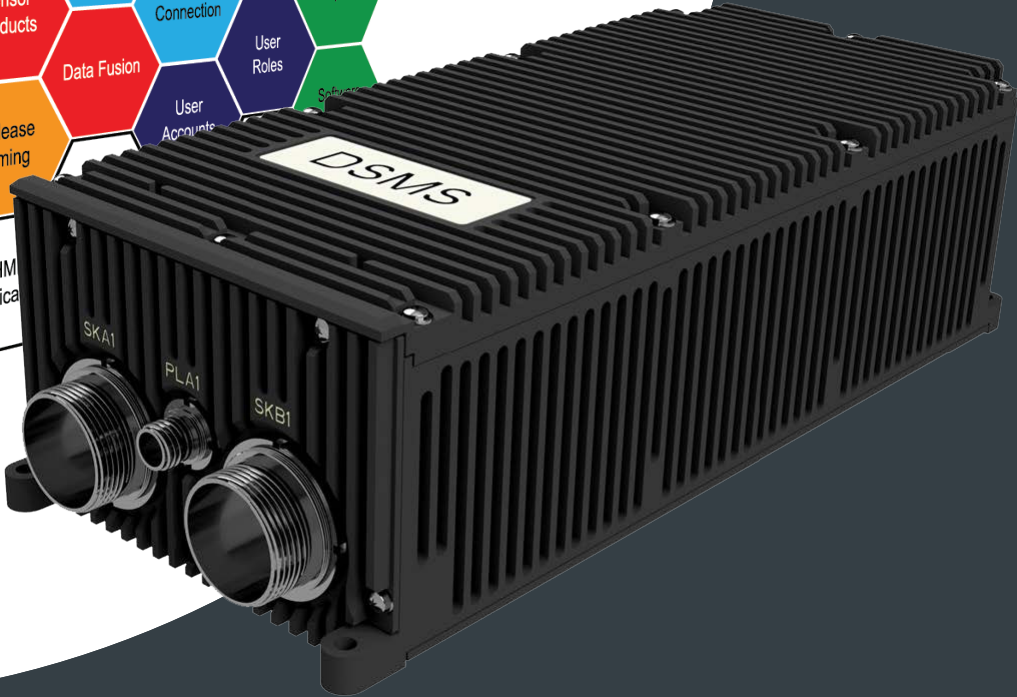

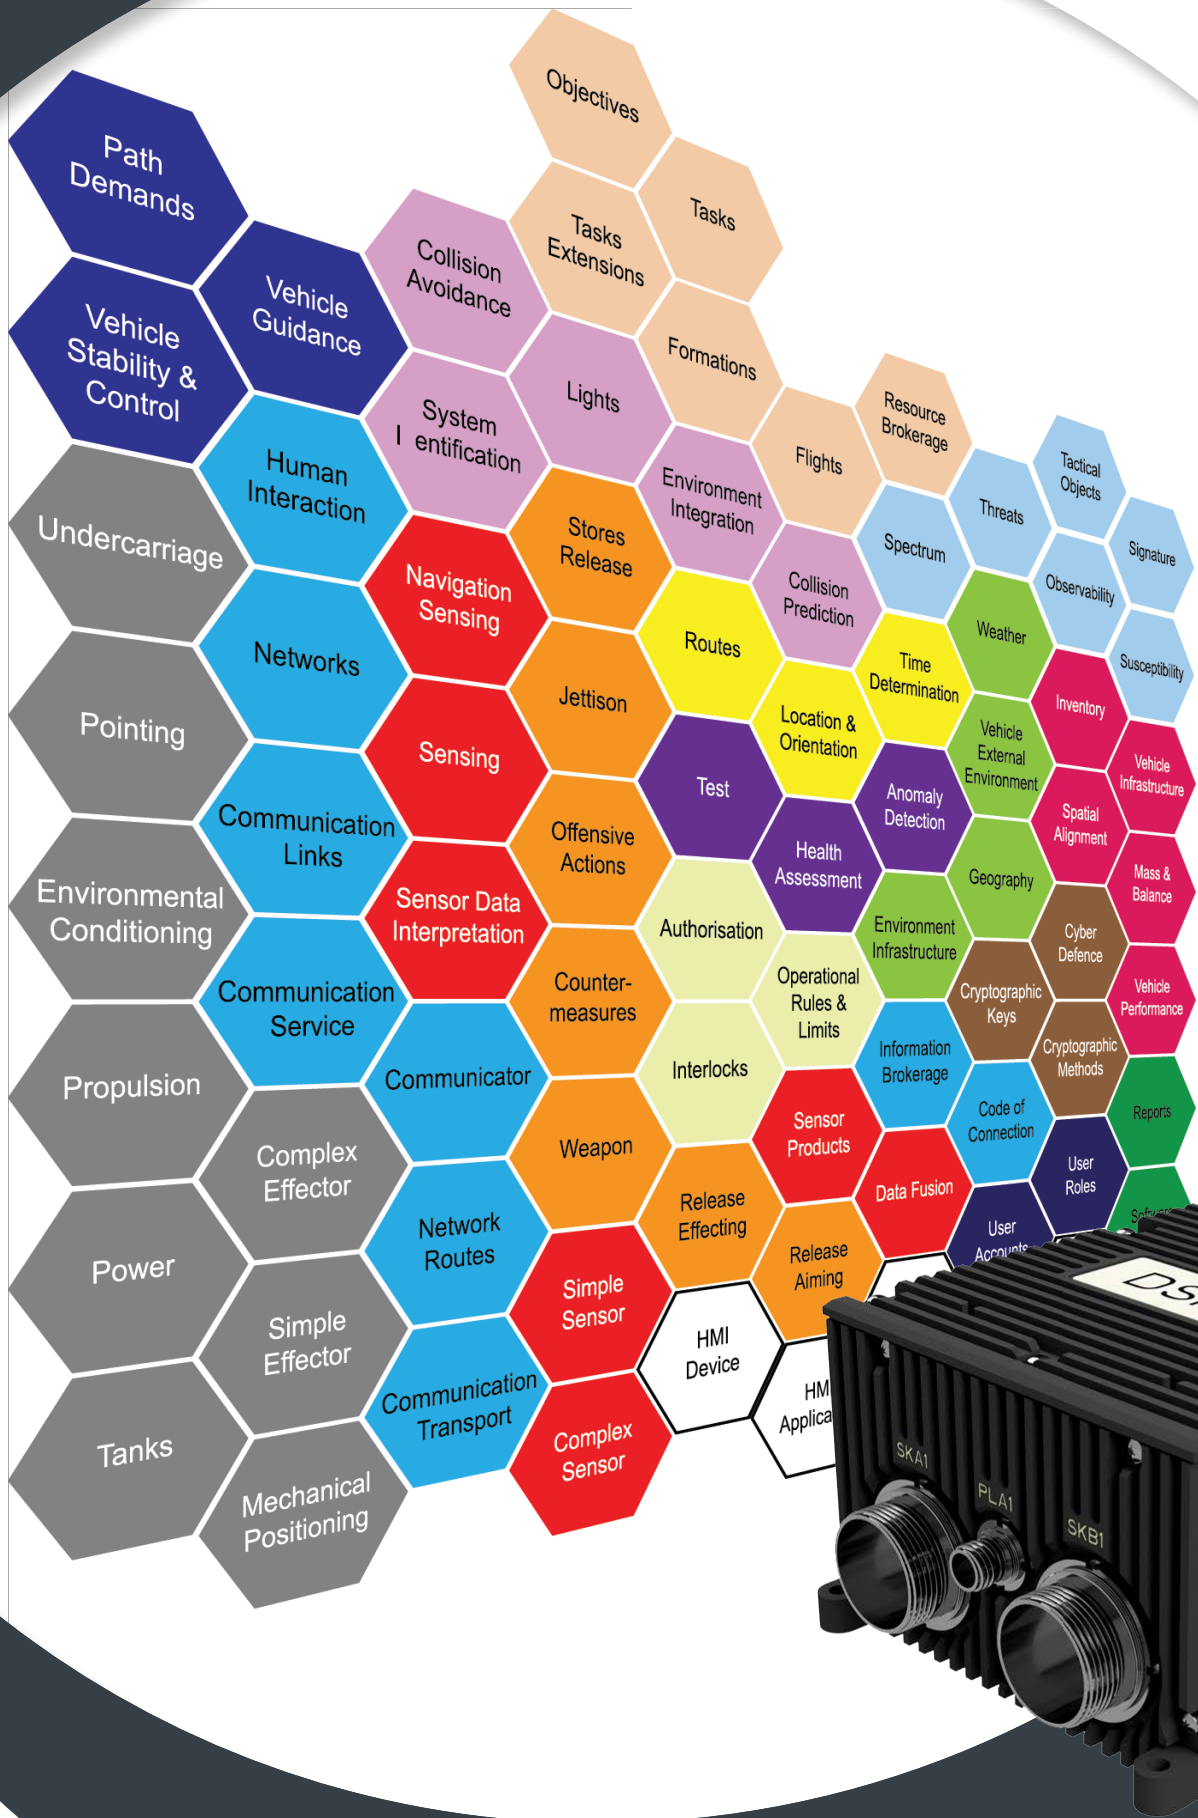

DISTRIBUTED STORES MANAGEMENT SYSTEM

Our world class Distributed Stores Management System has adopted the PYRAMID framework to deliver increased operational capabilities through rapid weapons integration.

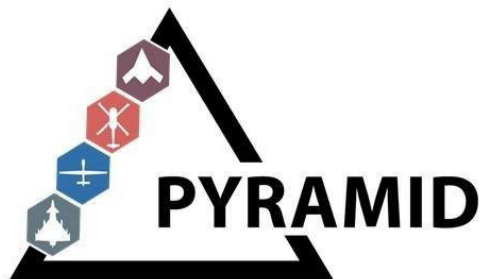

Designed to fit into any platform – from traditional crewed to small uncrewed platforms and launcher electronics – with reduced size, weight, and power configuration, our Distributed Stores Management System enhances weapons launch and carriage systems for increased impact and effectiveness.

Developed in accordance with DO-254/178C, this provides two MIL-STD-1760E class II ‘essential’ interfaces, two ASS725 (miniature munitions) store interfaces, and two suspension and release unit interfaces for weapon release to support two store stations.
